

The Hampshire County Broadband Initiative Council “*HCBIC*” was created through resolution by the Hampshire County Commission on January 24, 2017.

Our mission is to promote opportunities for utilities to bring robust, reliable and affordable broadband services to Hampshire County.

Our first goal is to provide broadband to areas that are currently unserved or underserved by service providers.

The HCBIC members recognize that broadband is essential to economic growth in today’s economy, and it is essential for education and social interaction in the Internet era. Not only is it important for rural Hampshire County to have access to broadband, but it must be robust, reliable and affordable as well.
